MINTEX

MATERIALS:
Shetkastone™
recycled paper

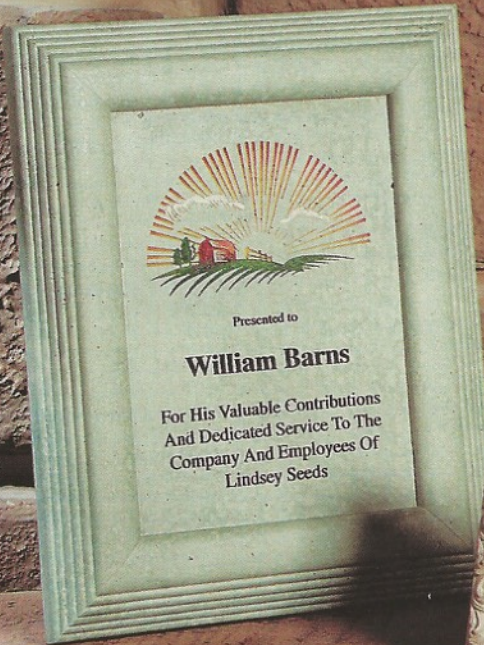

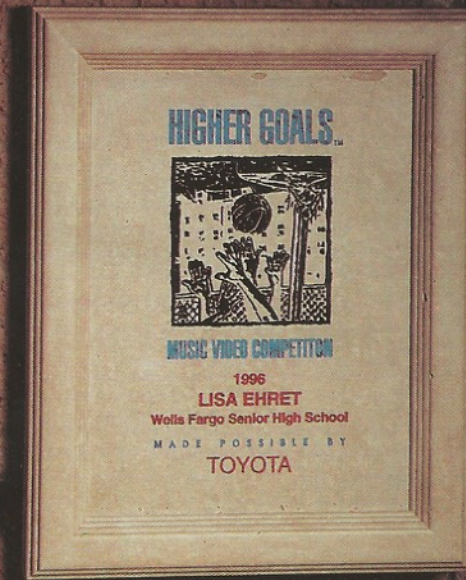

These exciting designs are crafted from a new material called Shetkastone™. This revolutionary material can be made from any post consumer waste paper and can be recycled again and again. The material is manufactured so that the cracks and veining you see will give each piece its own unique look – no two pieces are identical. Please contact the factory for information on custom designs.

Ionic

Doric

Renaissance

Gallery Frames

A patented process creates awards from recycled paper that are not only beautiful but environmentally friendly as well. The colors are created by using different papers and therefore there is some slight variation in color to add to each piece's uniqueness. Please see the pricing booklet for standard color choices and other information.

Gothic

Romanesque

Tuscan

These awards purposely show veining and slight flaws to give an antique look to each award and enhance its individuality. The process is so versatile that we can even use paper waste that you may have created to produce truly on-of-a-kind awards. Please contact the factory for details.
